

ARTIFICIAL INTELLIGENCE WITH REAL TIME COMMUNICATION

ABSTRACT

We have people with the technology significant developing day by day but no significant development undertaken For settlement of three people of communication between mute and normal person always has been is changing took it is very difficult for mute convey their message to normal people are not trained an hand sign language

In emergency times conveying their message is very difficult

System with hard recognition and will proper conversation between normal and in a proper language

Our coordination

The project aims to develop a system that counters the sign language into a human hearing voice into the language to convoy is message to normal people has well as convert speech

This app enable lead and dumb people to convoy their information using signs and get converted to human understandable language

SOFT WARE REQUIREMENTS

1.Anaconda python

2.Pycharm

SYSTEM REQUIREMENTS

1.8G (RAM) & OS
